2005 Mathematics

Standard Grade – General Paper 1 and Paper 2

Finalised Marking Instructions

These Marking Instructions have been prepared by Examination Teams for use by SQA Appointed Markers when marking External Course Assessments.
Special Instructions

1. The main principle in marking scripts is to give credit for the skills which have been demonstrated. Failure to have the correct method may not preclude a pupil gaining credit for the calculations involved or for the communication of the answer.

   Care should be taken to ensure that the mark for any question or part question is entered in the correct column, as indicated by the horizontal line.

   Where a candidate has scored zero marks for any question attempted, "0" should be shown against the answer in the appropriate column.

   It is of great importance that the utmost care should be exercised in adding up the marks. Where appropriate, all summations for totals and grand totals must be carefully checked.

2. The answer to one part, correct or incorrect must be accepted as a basis for subsequent dependent parts of a question. Full marks in the dependent part is possible if it is of equivalent difficulty.

3. Do not penalise insignificant errors. An insignificant error is one which is significantly below the level of attainment being assessed.

   eg An error in the calculation of 16 + 15 would not be penalised at Credit Level.

4. Working after a correct answer should only be taken into account if it provides firm evidence that the requirements of the question have not been met.

5. In certain cases an error will ease subsequent working. Full credit cannot be given for this subsequent work but partial credit may be given.

6. Accept answers arrived at by inspection or mentally, where it is possible for the answer to have been so obtained.

7. Do not penalise omission or misuse of units unless marks have been specifically allocated to units.
A wrong answer without working receives no credit unless specifically mentioned in the marking scheme.

The rubric on the outside of the Papers emphasises that working must be shown. In general markers will only be able to give credit to partial answers if working is shown. However there may be a few questions where partially correct answers unsupported by working can still be given some credit. **Any such instances will be stated in the marking scheme.**

Acceptable alternative methods of solution can only be given the marks specified, ie a more sophisticated method cannot be given more marks.

Note that for some questions a method will be specified.

In general do not penalise the same error twice in the one question.

Accept legitimate variations in numerical/algebraic questions.

Do not penalise bad form eg \( \sin x^0 = 0.5 = 30^0 \).

A transcription error is not normally penalised except where the question has been simplified as a result.
**Mathematics Standard Grade - General Level 2005 – Paper 1**

**Marking Instructions**

Award marks in whole numbers only

<table>
<thead>
<tr>
<th>Question No</th>
<th>Give 1 mark for each •</th>
<th>Illustrations of evidence for awarding each mark •</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 (a)</td>
<td>Ans: 33·82</td>
<td>•¹ correctly subtract 175·48 from 209·3</td>
</tr>
<tr>
<td></td>
<td></td>
<td>•¹ 33·82</td>
</tr>
<tr>
<td>(b)</td>
<td>Ans: 5103</td>
<td>•¹ correctly multiply 56·7 by 90</td>
</tr>
<tr>
<td></td>
<td></td>
<td>•¹ 5103</td>
</tr>
<tr>
<td>(c)</td>
<td>Ans: 46·3</td>
<td>•¹ correctly divide 324·1 by 7</td>
</tr>
<tr>
<td></td>
<td></td>
<td>•¹ 46·3</td>
</tr>
<tr>

</tr>
<tr>
<td></td>
<td>• 2 equation solved correctly</td>
<td>• 2 s = 15</td>
</tr>
</tbody>
</table>

Notes:

In part (c)

(i) For an answer of ($=) 4s + 1$ – award 1/2

(ii) Do not penalise bad form

(iii) A formula in words is not acceptable

(iv) For $s = 4m + 1$ – award 0/2

In part (d)

(i) Solution may be obtained by extending table

(ii) Final answer of 15 without working – award 0/2

(iii) For $61 ÷ 4 = 15(\cdot 25)$ – award 1/2
<table>
