The information in this publication may be reproduced to support SQA qualifications only on a non-commercial basis. If it is to be used for any other purposes written permission must be obtained from the Assessment Materials Team, Dalkeith.

Where the publication includes materials from sources other than SQA (secondary copyright), this material should only be reproduced for the purposes of examination or assessment. If it needs to be reproduced for any other purpose it is the centre's responsibility to obtain the necessary copyright clearance. SQA's Assessment Materials Team at Dalkeith may be able to direct you to the secondary sources.

These Marking Instructions have been prepared by Examination Teams for use by SQA Appointed Markers when marking External Course Assessments. This publication must not be reproduced for commercial or trade purposes.

General Marking Principles

These principles describe the approach to be taken when marking Intermediate 1 Mathematics papers. For more detailed guidance please refer to the notes which are included with the Marking Instructions.

- 1 Marks must be assigned in accordance with the Marking Instructions. The main principle in marking scripts is to give credit for the skills demonstrated and the criteria met. Failure to have the correct method may not preclude a candidate gaining credit for the calculations involved or for the communication of the answer.
- 2 The answer to one part of a question, even if incorrect, must be accepted as a basis for subsequent dependent parts of the question. Full marks in the dependent part(s) may be awarded provided the question is not simplified.
- **3** The following should not be penalised:
 - working subsequent to a correct answer (unless it provides firm evidence that the requirements of the question have not been met)
 - omission or misuse of units (unless marks have been specifically allocated for the purpose in the marking scheme)
 - bad form, eg sin $x^\circ = 0.5 = 30^\circ$
 - legitimate variation in numerical values / algebraic expressions.
- 4 Solutions which seem unlikely to include anything of relevance must nevertheless be followed through. Candidates still have the opportunity of gaining one mark or more provided the solution satisfies the criteria for the mark(s).
- 5 Full credit should only be given where the solution contains appropriate working. Where the correct answer may be obtained by inspection or mentally, credit may be given, but reference to this will be made in the Marking Instructions.
- 6 In general markers will only be able to give credit for answers if working is shown. A wrong answer without working receives no credit unless specifically mentioned in the Marking Instructions. The rubric on the outside of the question papers emphasises that working must be shown.
- 7 Sometimes the method to be used in a particular question is explicitly stated; no credit should be given where a candidate obtains the correct answer by an alternative method.
- 8 Where the method to be used in a particular question is not explicitly stated, full credit must be given for alternative methods which produce the correct answer.
- 9 Do not penalise the same error twice in the same question.
- 10 Do not penalise a transcription error unless the question has been simplified as a result.
- 11 Do not penalise inadvertent use of radians in trigonometry questions, provided their use is consistent within the question.

Practical Details

The Marking Instructions should be regarded as a working document and have been developed and expanded on the basis of candidates' responses to a particular paper. While the guiding principles of assessment remain constant, details can change depending on the content of a particular examination paper in a given year.

- 1 Each mark awarded in a question is referenced to one criterion in the marking scheme by means of a bullet point.
- 2 Where a candidate has scored zero marks for any question attempted, "0" should be shown against the answer in the place in the margin.
- 3 Where a marker wishes to indicate how s/he has awarded marks, the following should be used:
 - (a) Correct working should be ticked, \checkmark .
 - (b) Where working subsequent to an error is followed through, if otherwise correct and can be awarded marks, it should be marked with a crossed tick, \checkmark .
 - (c) Each error should be underlined at the point in the working where it first occurs.

4 Do not write any comments, words or acronyms on the scripts.

| Question No | Marking Scheme Give 1 mark for each • | Illustrations of evidence for awarding a mark at each • | | |
|----------------|--|---|--|--|
| 1 | Ans: 3.62 • ¹ process: calculate $5.42 - 1.8$ | • ¹ 3.62 1 mark | | |
| 2 | Ans: 167 | | | |
| | interpret: know to multiply 11 by 12 and then add 35 process: evaluate rule (multiplication must involve [number > 10] × 12) | •¹ 11×12+35 •² 167 2 marks | | |
| NOTES: | | I | | |
| 1 | Correct answer without working | award 2/2 | | |
| 2 | 132 (11×12) (no working necessary) | award 1/2 | | |
| 3 | $11 \times 2 \times 10 + 35$ (working must be shown) | award 1/2 | | |
| 3 | Ans: 4m 10s | | | |
| | • ¹ strategy: know to divide 1500 by 6 | • ¹ 1500 ÷ 6 | | |
| | \bullet^2 process: divide correctly | • ² 250 | | |
| | • ³ process: convert to minutes and seconds correctly | • ³ 4m 10s 3 marks | | |
| NOTES: | | | | |
| 1 | Correct answer without working | award 3/3 | | |
| 2 | $1500 \div 6 \rightarrow 2m 50s$ (working must be shown) award 2/3 | | | |
| 3 | $1500 \times 6 = 9000 \div 60 = 150$ (working must be sho | own) award 1/3 | | |
| 4 | 3 rd mark is not available for | | | |
| | (a) 4 hr 10 min | | | |
| | (b) converting a multiple of 60 seconds to minutes | | | |

Mathematics Intermediate 1: Paper 1, Units 1, 2 and 3

| Question No | | Marking Scheme live 1 mark for each | 1• | III | ustrations of a ma | evidence for rk at each • | awarding |

| | (e) 70% of (3 | (0+30) = 42 | 1/3 | | 0/3 | \times \checkmark \checkmark | |
| | (f) $60 + 60 =$ | 120 | 1/3 | | 0/3 | \checkmark × × | |
| 5 | Ans: £46 | | | | | | |
| | • ¹ strategy/ | process: correctly from 499 | subtract 85 | •1 | 414 | | |
| | • ² strategy: | know to divide an | swer by 9 | • ² | 414 ÷ 9 | | |
| | • ³ process: | divide correctly | | •3 | 46 | | 3 marks |
| NOTE: | | | | | | | |
| | <u>Final answer</u> 46 | | with workir 3/3 | <u>1g</u> | witho 2/3 | ut working | |
| | 64.89,64.88(| $[499+85] \div 9)$ | 2/3 | | 1/3 | | |
| | 55.44,55.45 | $(499 \div 9)$ | 1/3 | | 0/3 | | |
| | 9.44,9.45(8 | 5 ÷ 9) | 1/3 | | 0/3 | | |

| Question No | Marking SchemeIllustrations of evidence for awarGive 1 mark for each •a mark at each • | | |
|----------------|--|--|--|
| 6 | Ans: $n = 6$ | | |
| | • ¹ process: start to collect like terms | • $7n \text{ or } 42$ | |
| | • ² process: collect like terms <u>and</u> equate | \bullet^2 $7n = 42$ | |
| | • ³ process: solve equation for n | • ³ $n=6$ 3 marks | |
| NOTES: | | | |
| e | For answers without valid working (i) $n = 6$ without working (ii) $5 \times 6 + 9 = 51 - 2 \times 6 \rightarrow n = 6$ Only one of the first two marks can be awarded if 7 | award 0/3 <i>n</i> and 42 are not equated | |
| 3 H | For the award of the 3rd mark an answer of the form | n = is required | |
| 4 4 | Answers acceptable for partial credit (valid working must be shown) | | |
| Ì | (i) $7n = 42 \rightarrow 6$ (ii) $7n = 60 \rightarrow n = 8 \cdot 5$ (Disregard incorrect rounding) (iii) $3n = 42 \rightarrow n = 14$ award 2/3 | | |
| (| iv) $3n = 60 \rightarrow n = 20$ | award 1/3 | |
| | | | |

| Question No | Marking Scheme Give 1 mark for each • | Illustrations of evidence for awarding a mark at each • | |
|----------------|---|--|--|
| 7 (a) | Ans: $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$ | | |
| | • ¹ process: calculate y | ● ¹ -7 | |
| | • ² process: complete table | • ² -7, 2, 8 2 marks | |
| (b) | Ans: straight line graph of $y = 2 + 3x$ | | |
| | • ¹ communicate: prepare to draw line | • ¹ all three points from the table plotted correctly | |
| | • ² communicate: draw the line y = 2 + 3x | • ² draw straight line through the three points (see note 2) 2 marks | |
| NOTES: | I | | |
| 1 I | 1 If the line $y = 2 + 3x$ is drawn awar | | |
| | 2 Where the three points plotted are consistent with table and are not collinear, the second man is unavailable. | | |

| Question No | Marking Scheme Give 1 mark for each • | Illustrations of evidence for awarding a mark at each • |
|---------------------------------|--|---|
| 8 | Ans: £1.05 | |
| | • ¹ strategy: correct method | • $\frac{3}{5}$ of $70 \times 2\frac{1}{2}$ |
| | • ² process: start calculation | • ² $\frac{3}{5}$ of 70 = 42 or |
| | | $70 \times 2\frac{1}{2} = 175$ or $\frac{3}{5}$ of $2\frac{1}{2} = 1.5$ |
| | • ³ process: complete calculation | • ³ 105 |
| | | 3 marks |
| NOTES: | | |
| 1 1 | 05 with no working | award 0/3 |
| 2 <u>H</u> | inal answer (working must be shown) | |
| (a) 1.05 (no units necessary) | | award 3/3 |
| | (b) £105 | award 2/3 |
| 3 1 | $50 \times 70 = 10500 \times \frac{3}{5} = 6300$ | award 1/3 |

| Question | Marking Scheme | Illustrations of evidence for awarding | |
|----------|---|--|--|
| No | Give 1 mark for each • | a mark at each ● | |
| 9 | Ans: 6 | | |
| | • ¹ interpret: know how to evaluate formula | • ¹ $\sqrt{144 \div 4}$ or $\sqrt{144} \div \sqrt{4}$ | |
| | \bullet^2 process: start to evaluate | • ² $\frac{144}{4} = 36$ or $\sqrt{144} = 12$ | |
| | \bullet^3 process: complete evaluation | • ³ 6 | |
| | | 3 marks | |
| NOTES: | | | |
| 1 | Final answer (no working necessary) | | |
| | (a) $\sqrt{36}$ | award 2/3 | |
| | (b) 36 | award 1/3 | |
| | (c) $\sqrt{\frac{144}{4}}$ | award 0/3 | |
| 2 | Award 3 rd mark for a good approximation to \sqrt{n} where <i>n</i> is not a perfect square eg $\sqrt{35} = 5$ | | |
| | | | |

| Question No | Marking Scheme Give 1 mark for each • | Illustrations of evidence for awarding a mark at each • |
|----------------|---|--|
| 10 (a) | Ans: 4 -6 -2 -8 • ¹ interpret/process: complete number cell | • ¹ 2 1 mark |
| (b) | -6 5 -1 4 •1 strategy/process: final three numbers consistent •2 strategy/process: first three numbers consistent | • ¹ 5 • ² -6 2 2 marks |
| (c) | Ans: 1 -4 -3 -7 •1 strategy/process: experiment •2 strategy/process: complete number cell | • ¹ • ² -4 -3 (award 1 for two attempts where first three or final three numbers are consistent) 2 marks |
| NOTE: Th | e correct answer need not appear in the intended nun | nber cell for it to be acceptable. |

Where the publication includes materials from sources other than SQA (secondary copyright), this material should only be reproduced for the purposes of examination or assessment. If it needs to be reproduced for any other purpose it is the centre's responsibility to obtain the necessary copyright clearance. SQA's Assessment Materials Team at Dalkeith may be able to direct you to the secondary sources.

These Marking Instructions have been prepared by Examination Teams for use by SQA Appointed Markers when marking External Course Assessments. This publication must not be reproduced for commercial or trade purposes.

General Marking Principles

These principles describe the approach to be taken when marking Intermediate 1 Mathematics papers. For more detailed guidance please refer to the notes which are included with the Marking Instructions.

- 1. Marks must be assigned in accordance with the Marking Instructions. The main principle in marking scripts is to give credit for the skills demonstrated and the criteria met. Failure to have the correct method may not preclude a candidate gaining credit for the calculations involved or for the communication of the answer.
- 2. The answer to one part of a question, even if incorrect, must be accepted as a basis for subsequent dependent parts of the question. Full marks in the dependent part(s) may be awarded provided the question is not simplified.
- 3. The following should not be penalised:
 - working subsequent to a correct answer (unless it provides firm evidence that the requirements of the question have not been met)
 - omission or misuse of units (unless marks have been specifically allocated for the purpose in the marking scheme)
 - bad form, eg sin $x^\circ = 0.5 = 30^\circ$
 - legitimate variation in numerical values/algebraic expressions.
- 4. Solutions which seem unlikely to include anything of relevance must nevertheless be followed through. Candidates still have the opportunity of gaining one mark or more provided the solution satisfies the criteria for the mark(s).
- 5. Full credit should only be given where the solution contains appropriate working. Where the correct answer may be obtained by inspection or mentally, credit may be given, but reference to this will be made in the Marking Instructions.
- 6. In general markers will only be able to give credit for answers if working is shown. A wrong answer without working receives no credit unless specifically mentioned in the Marking Instructions. The rubric on the outside of the question papers emphasises that working must be shown.
- 7. Sometimes the method to be used in a particular question is explicitly stated; no credit should be given where a candidate obtains the correct answer by an alternative method.
- 8. Where the method to be used in a particular question is not explicitly stated, full credit must be given for alternative methods which produce the correct answer.
- 9. Do not penalise the same error twice in the same question.
- 10. Do not penalise a transcription error unless the question has been simplified as a result.
- 11. Do not penalise the inadvertent use of radians in trigonometry questions, provided their use is consistent within the question.

Practical Details

The Marking Instructions should be regarded as a working document and have been developed and expanded on the basis of candidates' responses to a particular paper. While the guiding principles of assessment remain constant, details can change depending on the content of a particular examination paper in a given year.

- 1. Each mark awarded in a question is referenced to one criterion in the marking scheme by means of a bullet point.
- 2. Where a candidate has scored zero marks for any question attempted, "0" should be shown against the answer in the place in the margin.
- 3. Where a marker wishes to indicate how s/he has awarded full marks, the following should be used:
 - (a) Correct working should be ticked, \checkmark .
 - (b) Where working subsequent to an error is followed through, if otherwise correct and can be awarded marks, it should be marked with a crossed tick, \times .
 - (c) Each error should be underlined at the point in the working where it first occurs.
- 4. Do not write any comments, words or acronyms on the scripts.

| Question No | Marking SchemeIllustrations of evidence for awardGive 1 mark for each •a mark at each • | | |
|---|--|--|--|
| 1 | Ans: 12430 pesos | | |
| | • ¹ strategy/process: correctly multiply 650 by 19·13 | • ¹ 12434·5 | |
| | \bullet^2 process: round to nearest ten | • ² 12430 2 marks | |
| NOTES: | <u> </u> | | |
| (| Answers acceptable for partial credit (no working no (a) 12434, 12435, 12400 (b) 30 (650 ÷ 19.13 to nearest 10) | ecessary) award 1/2 award 1/2 | |
| 2 H | For 12440 with no evidence of $12434(.5)$ or 12435 | award 0/2 | |
| 2 | Ans: 5.4×10^{-6} | | |
| 2 | I process: express in standard form | \bullet^1 5.4×10 ⁿ | |
| | • ² process: express in standard form | • ² $5 \cdot 4 \times 10^{-6}$ 2 marks | |
| NOTE: | | | |
| 54 × | 10^{-7} , 0.54×10^{-5} , 5×10^{-6} | award 1/2 | |
| 3 | Ans: $t > 9$ | | |
| | • ¹ process: collect constants | • $4t > 36$ | |
| | • ² process: solve inequality for t | • ² $t > 9$ 2 marks | |
| NOTES: | I |) | |

|----------------|--|---|--|--|--|
| 12 | Ans: 25m | 1 | | | |
| | • ¹ strategy: know that hypotenuse is 20 | \bullet^1 $20/50^\circ$ | | | |
| | • ² strategy: know how to use sine ratio | $\bullet^2 \qquad \sin 50^\circ = \frac{x}{20}$ | | | |
| | \bullet^3 strategy: know how to solve equation | $\bullet^3 \qquad x = 20\sin 50^\circ$ | | | |
| | • ⁴ process: carry out trigonometric calculation | • ⁴ 15(·3) | | | |
| | • ⁵ strategy: add 10 to previously calculated value | • ⁵ 25(· 3) 5 marks | | | |
| NOTES: | | | | | |
| 1 0 | 1 Correct answer without working award 0/5 | | | | |
| 2 4 | 2 4.8 (radians), 24.1 (grad) [working must be shown] award 5/5 | | | | |
| | 3 Where an incorrect trig ratio is used, working should be followed through with the possibility of awarding 4/5 | | | | |
| | Do not award the 4 th mark for eg $20 \sin 50^\circ = 15 \cdot 3 = \sqrt{15 \cdot 3} = 3 \cdot 9$ | | | | |

| Question No | Marking Scheme Give 1 mark for each • | Illustrations of evidence for awarding a mark at each • | | | |
|----------------|--|---|--|--|--|
| 13 | Ans: 20% | | | | |
| | • ¹ strategy: find increase | • ¹ 50 | | | |
| | • ² strategy: know to express increase as fraction of 250 | • ² $\frac{50}{250}$ | | | |
| | • ³ strategy: know to multiply fraction by 100 | $\bullet^3 \frac{50}{250} \times 100$ | | | |
| | • ⁴ process: carry out all calculations correctly | • ⁴ 20 4 marks | | | |
| NOTES: | | | | | |
| 1 (| Correct answer without working | award 4/4 | | | |
| 2 | with | h working without working | | | |
| (a) - | $\frac{50}{300} \times 100 = 16(.6) \text{ or } 17$ 3/4 | 0/4 | | | |
| (b) | $\frac{300}{250} \times 100 = 120$ 3/4 | 0/4 | | | |
| (c) · | $\frac{250}{300} \times 100 = 83(\cdot 3)$ 2/4 | ₩ 0/4 | | | |
| (d) | $\frac{50}{100} \times 250 = 125$ 1/4 | 0/4 | | | |
| (e) · | $\frac{50}{100} \times 300 = 150$ 1/4 | 0/4 | | | |
| (f) - | $\frac{50}{00} \times 550 = 275$ 1/4 | 0/4 | | | |

| Question No | Marking Scheme Give 1 mark for each • | | Illustrations of evidence for awarding a mark at each • | | | | | | |
|----------------|---|---|---|--|---|--|---------|--|--|
| 14 | Ans: $21 \cdot 9n$ • ¹ strategy: | know to calculate are | a of semi- | • ¹ A | $4 = \frac{1}{2}\pi r^2$ | 2 | | | |
| | • ² strategy: | circle substitute correct rad formula | titute correct radius into area | | | $\bullet^2 \frac{1}{2} \times \pi \times 3^2$ | | | |
| | • ³ strategy: | know to subtract area circle from area of re | | • ³ (| $8 \times 4.5 \left(-\left(\frac{1}{2} \times \pi \times 3^2\right) \right)$ | | | | |
| | • ⁴ process: | carry out all calculati correctly (must inclue calculation and either squaring of a number division by 2) | de a circle the | $\begin{array}{c c} a \text{ circle} \\ he \end{array} (21.87 (3.14))$ | | | | | |
| | • ⁵ process: | round to one decimal | place | • ⁵ 2 | 21.9 | | 5 marks | | |
| NOTES: | | | | | | | | | |
| 1 F | First 2 marks not | available if $C = \pi d$ is | used | | | | | | |
| 2 E | Examples of some | e common answers | with | workin | g | without worl | king | | |
| (8 | a) $36 - \frac{1}{2} \times \pi \times 3^2$ | $r^{2} = 21.9$ | 5/5 | | | 4/5 | | | |
| (| $b)36 - \pi \times 3^2 = 7$ | 7.7 | 4/5 | | | 0/5 | | | |
| (| c) $36 - \frac{1}{2} \times \pi \times 6^{\frac{1}{2}}$ | $e^2 = -20.5$ | 4/5 | | | 0/5 | | | |
| (| d) $36 - \pi \times 6^2 = -$ | -77.1 | 3/5 | | | 0/5 | | | |
| (| e) $36 - 3 \cdot 14 \times 6^2$ | = -77.0 | 3/5 | | | 0/5 | | | |
| (2 | f) $36 - \frac{1}{2} \times \pi \times 6$ | = 26.6 | 3/5 | | | 0/5 | | | |
| (| $g)36 - \pi \times 6 = 17$ | 2.2 | 2/5 | | | 0/5 | | | |
| | Jnrounded or incless than those sh | orrectly rounded versic own above. | ons of the above | ve ansv | wers shou | ıld be awarded | 1 mark | | |
| | 41. | | | | | | | | |

4 5^{th} mark only available where candidate is required to round circle calculation to one decimal place.
