

1. A straight line has as its equation $y = x + 1$.

(a) **Copy** and complete the table for this line.

x	0	1	2	3	4	5
y	1			4		

(b) Plot the points from the table on a coordinate diagram and draw the line through them.

2. A straight line has as its equation $y = 2x$.

(a) **Copy** and complete the table for this line.

x	0	1	2	3	4	5
y		2			8	

(b) Plot the points from the table on a coordinate diagram and draw the line through them.

3. A straight line has as its equation $y = \frac{1}{2}x + 4$.

(a) **Copy** and complete the table for this line.

x	0	2	4	6	8	10
y	4				8	

(b) Plot the points from the table on a coordinate diagram and draw the line through them.
