## HOME EXERCISE 14

Set out carefully all appropriate working.
Do not use a calculator in questions 1,2 or 3 .
Use a calculator in question 4.

1. Solve the equation:

$$
\begin{equation*}
(x+2)^{2}=16 \square x(2 \square x) \tag{4}
\end{equation*}
$$

2. Solve the system of equations algebraically:

$$
\begin{align*}
a+4 b & =12 \\
2 a \square 3 b & =2 \tag{4}
\end{align*}
$$

3.

| 7th | $\mathbf{9 : 9 5}$ |  |  |  |  |

The table shows the results of a race involving 19 runners.

The times shown are in seconds and hundredths of an second.
(a) Construct a boxplot to illustrate this information. (scale below)
(b) Calculate the semi-interquartile range.
race times

| T1T1T1T | T11T\|T11 | T11T\|T11| | T11T11T1 |
| :---: | :---: | :---: | :---: |
| 9 | 10 | 12 | 213 |
|  | sec | nds |  |

4. The triangles shown are right-angled.

(b)

Calculate the values of $x$ and $y$, correct to one decimal place.
